COMPUTER ENGINEERING - HTML PROJECT

Assigned: March 9, 2021
Due: April 1, 2021

You will design and execute a website on a topic of your choosing.

[CodeAcademy Link to HTML Course](#)

[CodeAcademy Link to CSS Course](#)

[Adding YouTube links to HTML](#)

Adding JavaScript ([Link 1](#), [Link 2](#))

How you will be scored:

7 - A website with HTML, JS, and CSS elements. Details for a 6 plus: More than one 'page' (or page refresh) is made. You should be able to click on a link on one page and it brings you to another. You will need to research where to host this and how. Bell will have some suggestions for you.

6 - A website with HTML and CSS elements. Website is clear and well-designed, with good research and varied media styles. Looks visually appealing. A list of sources is included

5 - A website with HTML and some CSS elements. Website is clear and well-laid out, with good research of topic and varied media styles (table, photo, etc). A list of sources is included.

4 - A website with HTML elements. Website is clear, research topic is evident, and some media styles are incorporated (table, photo, etc). An incomplete list of sources is included.

3 - A website with some HTML elements. Website has some text, headers, and divisions. Very few media styles are incorporated. No Sources.

2 - A website that is just the skeleton of an HTML doc. No body text, no media, no sources.

1 - Did not attempt the project.
